- 2 years

Sensor light with magnetic base

Our sensor luminaire with magnetic base combines an attractive design with outstanding functionality. With an impressive brightness of 50Lux and a colour temperature of 6500K, it creates a bright, powerful light that perfectly illuminates your surroundings.

Thanks to its integrated PIR sensor, the luminaire offers an intelligent switching mode: ON / OFF. It automatically detects movement in its range and switches on when you need it, and switches off automatically after a certain period of inactivity. This saves you energy and extends battery life.

Our sensor light is small and handy, so you can take it anywhere. It doesn't need any cumbersome cables as it runs on three AAA batteries. This means total flexibility in where you can place the light, whether it's in a cupboard, garage, basement or even outdoors.

The magnetic base allows for easy and secure attachment to various surfaces, be it metal shelves, doors or other magnetic surfaces. You can easily attach the light and remove it again if necessary without having to drill holes or use glue.

Specifications:

- Colour temperature: 6500K
- Brightness: 50Lux
- PIR sensor
- Sensor switching mode: ON/OFF
- Operates with 3x AAA battery (not included)
- Magnetic base
- Colour: white

Dimensions:

- Product: Ø85×H60 mm, base: Ø45 mm
- Packaging: 76×76×93mm
- Net/gross weight: 95g / 134g
