

Highlights

- **Light source**
Insect attraction with 2×8Watt UV fluorescent tube
- **Operating hours**
The average service life of the light source is 8000 hours.
- **Effective & environmentally friendly**
The insect killer is based on a physical method and does not use any sprays, pesticides, chemical substances or odours.
- **Easy to clean**
Easy to clean thanks to the removable drip tray.

This insect killer effectively solves the problem of annoying insects in our environment. The insects are attracted by the attraction of UV light, destroyed by high-voltage current and then safely stored in a removable container.

The device's fluorescent tube emits ultraviolet light with a specially selected wavelength, which is extremely attractive to flying insects. A special wire mesh protects the light source, while the high-voltage current flowing through the wire mesh generates an electrical impulse that kills the insects with a soft crackling sound. The dead insects fall directly into the removable tray at the bottom of the device, which should be emptied at regular intervals.

This device eliminates insects without the use of chemical substances and presents itself as an aesthetically pleasing alternative to conventional hanging insect sprays used in the past. Compared to aerosols, it does not release harmful chemicals and protects us from suffocating vapours and pollutants, as was the case with older methods.

The installation of the device is very simple - place it on a table top in a place with increased insect activity or hang it in a desired location. The ultraviolet radiation emitted is completely harmless to humans and pets, and the robust ABS plastic housing ensures safe and long-term use of the lamp.

Scope of delivery

- Insect killer
- Chain for hanging
- Operating instructions

Warranty period

- 2 years

Specifications:

- Power supply: 220V-240V, 50-60Hz
- Power: 16 Watt
- Voltage: 2500 Volt
- Odourless and noiseless attraction by UV light day and night
- Highly efficient UV lamp for attracting insects
- UV lamp: 2 x 8 watts
- Wavelength: 365 nm
- Material: fireproof ABS + aluminium
- Average service life of 8,000 operating hours
- Effective area: up to 50m²
- Chemical-free, environmentally friendly
- Removable, washable drip tray

Dimensions:

- Product (W×H×D): 342×285×93 mm
- Packaging (W×H×D): 360×290×98 mm
- Net/gross weight: 1.4 kg / 1.6 kg
