

Diesel forced air heater 30KW

SHXDO30KW

Highlights

- **30 kW heating capacity**
for rapid heating of large rooms up to 300 m²
- **High air flow rate**
of 1,000 m³/h distributes the warm air evenly
- **Safety**
with overheating protection and flame monitoring
- **Large 19-litre tank**
for long running times with a consumption of just 2.7 litres per hour
- **Stainless steel**
Combustion chamber for reliable and long-lasting operation
- **IPX4 protection rating**
splash-proof for everyday use on building sites

Mobile 30kW diesel space heater – effective heating for large spaces

This high-performance diesel heater is ideal for heating large areas quickly and reliably – for example, in workshops, warehouses or on building sites. With a heat output of 30kW and an air flow rate of 1,000 m³/h, it ensures that comfortable temperatures are maintained even in cool environments.

The heater can be fuelled by diesel or kerosene and is fitted with a durable stainless-steel combustion chamber. An integrated fan aids heat distribution and ensures the unit operates reliably. Additional safety features include an automatic shut-off in the event of overheating, flame monitoring with fuel cut-off, and a thermocouple for temperature control.

The desired temperature can be conveniently set via the built-in control panel. A permanently fitted oil level gauge provides a clear overview of the fill level of the 19-litre tank at all times. With a consumption of around 2.7 litres per hour, prolonged operation is also possible without any problems.

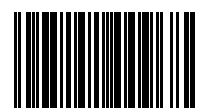

Thanks to its sturdy castors, the unit is easy to transport and versatile in use. With an IPX4 protection rating, it is also protected against splashing water, making it ideally suited to demanding environments.

Ideal for areas of up to 300 m² – reliable, safe and portable.

Note: This appliance must be installed in accordance with the relevant regulations and must only be used in adequately ventilated rooms. Please read the instructions before installing and using this appliance.

Garantiezeit

2 years

Specifications:

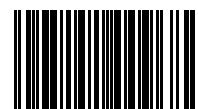

- 30 kW heating capacity
- Can be operated with diesel or kerosene
- Stainless steel combustion chamber with fan-assisted cooling
- 19-litre tank capacity
- Fuel consumption: approx. 2.7 litres per hour
- Air flow rate: 1,000 m³/h
- Suitable for areas up to 300 m²
- With overheating protection
- Thermostat control
- Flame monitoring (flame-out fuel cut)
- Thermocouple
- Integrated control panel for temperature setting
- Fixed oil level indicator for a quick overview
- Efficient motor: 200 W motor power
- IPX4 protection rating
- With 2 wheels for easy transport
- Mains connection: 220–240 V, 50 Hz

Dimensions:

- Product (W×H×D): 760×530×400 mm
- Packaging (W×H×D): 805×445×350 mm
- Net/Gross weight: 16.2 kg / 18 kg

Note: This appliance must be installed in accordance with the relevant regulations and must only be used in adequately ventilated rooms. Please read the instructions before installing and using this appliance.
